

Bello Abdulmuqtadir Inuolaji

Full-Stack Developer Phone: +234 816 588 5581 | Email: belloinuolaji@gmail.com GitHub: <https://github.com/INUOLAJI> | LinkedIn: <https://www.linkedin.com/in/bello-inuolaji-637962405>

Portfolio: <https://portfolio-chi-mauve-14.vercel.app/> Location: 29 Goshen Street, Iju, Ota, Ogun State, Nigeria

PROFESSIONAL SUMMARY

Full-Stack Developer with 3+ years building production web applications, APIs, and databasedriven systems. Strong backend and frontend skills with hands-on experience in Python/Django, Django REST Framework, Node.js/Express, React, PHP, and PostgreSQL. Experienced in authentication (JWT), real-time features (Socket.io), payment integration (Stripe), and designing scalable relational schemas. Preparing to pursue a B.Sc. in Cybersecurity to strengthen secureddevelopment practices. Seeking full-stack roles to deliver end-to-end features, improve app reliability, and contribute to secure engineering.

TECHNICAL SKILLS

- Languages: Python, JavaScript (ES6+), PHP, SQL
- Backend: Django, Django REST Framework, Express (Node.js), native PHP
- Frontend: React, React-Bootstrap, HTML5, CSS3, Tailwind CSS, Bootstrap
- Databases: PostgreSQL (schema design, indexing, query optimization)
- APIs & Integrations: RESTful APIs, JWT authentication, Stripe payments, WebSockets (Socket.io)
- Dev Tools & Practices: Git/GitHub, Postman, basic Docker, CI/CD concepts, unit/integration testing
- Concepts: RBAC, authentication & authorization, data modeling, caching strategies, secure coding basics

PROFESSIONAL EXPERIENCE Independent Developer (2023–Present)

- Designed, developed, tested, and deployed end-to-end applications across multiple stacks; managed code and releases using Git/GitHub.
- Architected REST APIs with authentication, role-based access control, and production-ready relational schemas.
- Implemented responsive client-side applications in React and integrated third-party services such as Stripe and Socket.io for real-time flows.
- Performed testing, wrote clear README/setup scripts, and handled deployments to cloud hosts (Vercel/Heroku/other).

EDUCATION

Lagos State University (LASU) — B.Sc. Cybersecurity (Admission in Progress) Ota Total Academy — Secondary School Diploma, 2023

SELECTED PROJECTS (Technical & Measurable)

E-Commerce Admin Dashboard — React, Node.js, PostgreSQL, Socket.io

- Scope: Centralized inventory and order management for store managers.
- Backend: Node.js + Express API with normalized PostgreSQL schema (products, SKUs, inventory_transactions, users, roles). Indexing on search fields for performance.
- Real-time: Socket.io channels for inventory and order updates; implemented optimistic UI updates and reconciliation logic.
- Auth: JWT-based auth with refresh tokens and role-based permission checks (admin, manager).

- Outcome: Reduced inventory reconciliation errors by ~40%; saved ~10 hours/week in manual work.
- Links: (GitHub Repo: <https://github.com/INUOLAJI/frontend-ecommerce.git> | demo links: <https://marvelous-store-front.vercel.app/>)

Client Connect Portal — Express, PostgreSQL, React-Bootstrap, Stripe

- Scope: Secure booking portal with payment processing.
- Backend: Express API with atomic booking + payment flows using DB transactions. Webhook handlers for Stripe to reconcile payments.
- Frontend: React components with React-Bootstrap; client + server validation to prevent inconsistent states.
- Security: Stripe webhook signature verification, input sanitization, and transactional checks to prevent double-booking.
- Outcome: 25% increase in successful bookings and reduced double-booking incidents.
- Links: (GitHub Repo: https://github.com/INUOLAJI/client_portal.git | demo links: <https://client-portal-psi-umber.vercel.app/>)

Algorithmic URL Shortener Engine — PHP, PostgreSQL

- Scope: High-throughput URL shortener with collision-resistant short codes. • Design: Hybrid counter + salt hashing algorithm to avoid collisions and reduce predictability. Unique constraints and index optimization in PostgreSQL.
- Performance: Caching for hot redirects; minimal-latency redirect handler.

- Security: URL validation, rate limiting to prevent abuse, logging/analytics for each redirect.
- Outcome: Reliable, low-latency redirects and secure short-code generation.
- Links: (GitHub Repo: https://github.com/INUOLAJI/url_shortener.git | demo links: <https://urlshortener.onrender.com/>)

RESTful Blogs API Engine — Django, Django REST Framework, JWT

- Scope: Content API with RBAC (admin, author, reader), CRUD, comment system, search and filters.
- Backend: Django models with select_related/prefetch_related to prevent N+1 query issues. Pagination, filtering, and search endpoints.
- Auth: JWT via DRF with refresh tokens and view/object-level permission enforcement.
- Testing & Docs: Unit tests for core endpoints; OpenAPI/Swagger docs for onboarding.
- Outcome: Maintainable content API suitable for scaling and integration.
- Links: (GitHub Repo: https://github.com/INUOLAJI/Blogs_API.git | demo links: <https://blogsapiw90z.onrender.com/api/schema/swagger/>)

ADDITIONAL PRACTICES

- Version control: feature branches, PRs, code reviews; clear commit messages.
- Developer experience: thorough READMEs, environment setup, seeded dev data.
- Security hygiene: secure secret handling, least-privilege principles, input validation.

- Continuous learning: following OWASP basics and secure-coding patterns.

ACHIEVEMENTS & STRENGTHS

- 3+ years of self-directed full-stack development experience across multiple technology stacks.
- Strong debugging and system troubleshooting skills; comfortable with both backend performance tuning and frontend UX improvements.
- Capable of delivering from database schema design through to polished UI and deployment.

CAREER OBJECTIVE

Seeking full-stack developer roles to architect scalable features, implement secure APIs, and deliver production-quality applications while advancing knowledge in secure software development and systems architecture.
